Portfolio: iamehmetozdemir.github.io

Profile

Third-year Computer Engineering student with a strong focus on C/C++ development and algorithmic optimization. Solid background in data structures, graph theory, functional programming (especially Haskell) and efficient software design, and growing experience in machine learning. I like building things that are well tested and measurable. Looking to contribute to high-performance, scalable software in a team-oriented environment.

Education

Istanbul Technical University, Istanbul 2023 – 2028
Computer Engineering, 100% English Program *GPA: 3.22 / 4.0*

Projects

Bilingual Spam Detector | *Python, scikit-learn, FastAPI* Live demo · GitHub

- Built a Turkish + English spam classifier using TF-IDF (word and character n-grams) and Logistic Regression, trained on 10k+ messages from two public datasets.
- Selected the model with 5-fold cross-validation over 12 configurations and evaluated it once on a held-out test set: 99.6% accuracy, F1 0.99 for both languages; analysed calibration, learning curves and errors.
- Per-language evaluation showed my first model (Naive Bayes) missed about half of the English spam, which led to the switch to a linear model with character n-grams.
- Served the model with FastAPI and ported it to JavaScript for a serverless browser demo; a CI test checks that both give the same results.

Match-3 Puzzle Game | *Unity, C#, NUnit* Play in browser · GitHub

- Built a complete match-3 game with 8 levels, obstacles, special tiles with chain reactions and boosters, playable in the browser (WebGL).
- Separated the game rules into a Unity-independent C# engine that resolves each turn as data (run detection with union-find, cascades, gravity around blocking obstacles) and replays it as animation.
- Covered the engine with 48 unit tests and 5 Play Mode tests in CI; tuned level difficulty with a bot simulator and used object pooling to avoid frame drops on phones.

Work Experience

Software Engineering Intern, Commencis Jul 2026 – Aug 2026
Istanbul

- Developed Android applications using Kotlin and Android Studio.

Intern, Denizbank Dec 2024 – Jan 2025
Istanbul

- Selected for the "Denizaşırı" talent program; gained an overview of large-scale banking IT infrastructure and digital transformation.

Grocery Clerk, Shaw's Markets Jun 2025 – Sep 2025
Cape Cod, MA, USA – J-1 Summer Work and Travel Program

Leadership & Volunteering

Board Member, Anadolu Foundation – Anadolu Volunteers 2026 – Present

- Plan and coordinate social responsibility projects within the foundation's volunteer network.
- Lead volunteer teams and coordinate communication between stakeholders and volunteer groups.

Skills

Programming: C, C++, Java, Python, C#, Kotlin, JavaScript, Haskell
Libraries & Tools: scikit-learn, pandas, FastAPI, pytest, Unity, Android Studio, Git, GitHub Actions
Databases: MSSQL
Languages: English (Fluent), Turkish (Native), French (Elementary)

Certifications

Object-Oriented Programming in Java – UC San Diego (2024) · Google Cloud Essentials – Google (2024) · Microsoft AI Innovators (2026) · C Programming Language and Web Development with HTML5 – BTK Academy (2024)
